

Airbnb Business Intelligence Dashboard

Portfolio Project Report

Project Overview

This Power BI project analyzes Airbnb listings, hosts, reviews, pricing, market share, and customer ratings across major cities. The dashboard was designed to transform raw Airbnb data into actionable business insights through KPI cards, trend analysis, and interactive visualizations.

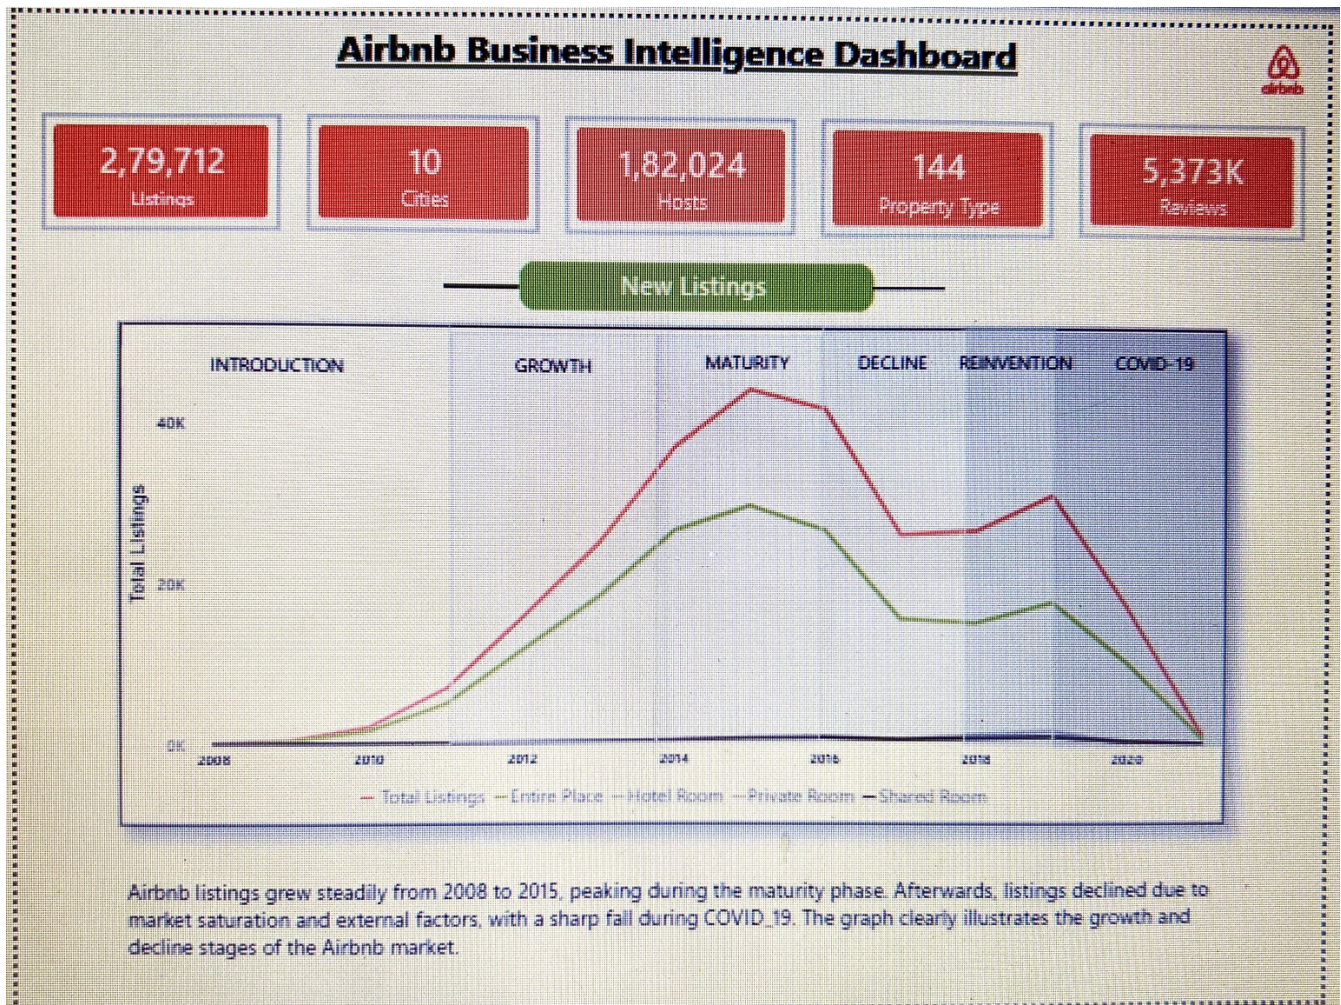

Tools Used

- Power BI
- DAX Measures
- Data Modeling
- Data Cleaning & Transformation
- Data Visualization

Key KPIs

- Total Listings: 279,712
- Cities: 10
- Hosts: 182,024
- Property Types: 144
- Reviews: 537.3K

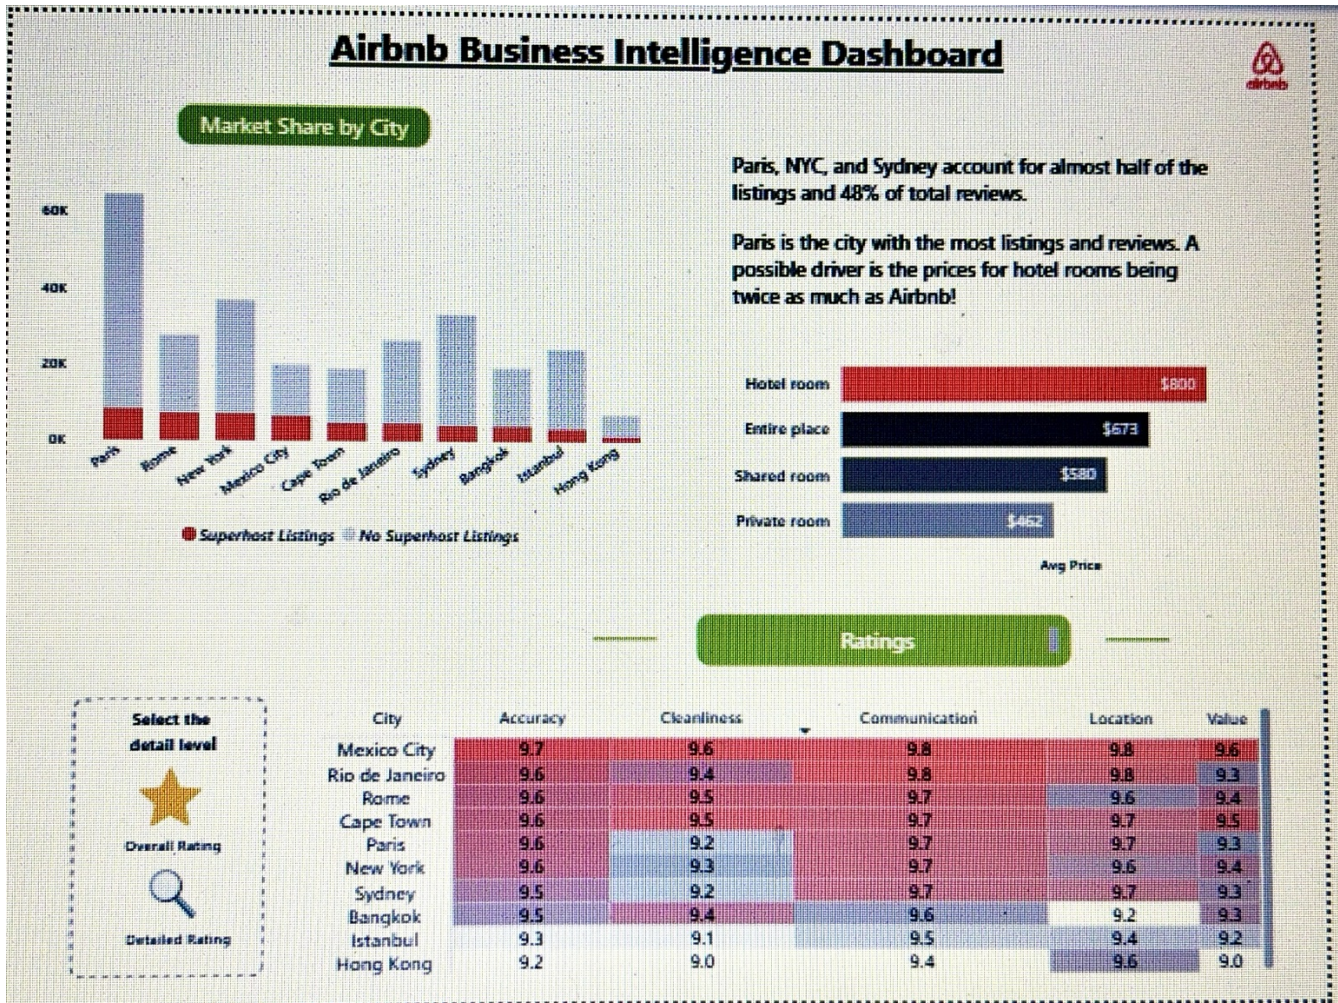

Dashboard Page 1 - Overview

Insights

Airbnb listings experienced strong growth from 2008 to 2015, reaching peak maturity before declining due to market saturation and external factors. The COVID-19 period shows a significant drop in new listings.

Dashboard Page 2 - Market Share & Ratings

Business Insights

- Paris, New York, and Sydney account for a large share of listings and reviews.
- Hotel rooms have the highest average price among property types.
- Cities such as Mexico City and Rio de Janeiro show strong customer ratings across multiple dimensions.
- Rating analysis helps identify locations delivering superior guest experiences.

Resume Summary

Developed an interactive Airbnb Business Intelligence Dashboard in Power BI to analyze listing growth, pricing trends, market share, and customer ratings. Created KPI cards, DAX measures, and analytical visualizations to generate business insights and support data-driven decision making.
